## **DETAILED ACTION**

### ***Election/Restrictions***

15. The Examiner acknowledges the affirmation of Group I, claims 1-26, 52-72 with traverse. Group II, claims 27-39 and 73-82; Group III, claims 40-51, 83-91, and 102-106; Group IV, claims 92-96; and Group V, claims 97-101 are all withdrawn regarding the non-elected inventions.

Applicant's arguments regarding the issue that "it would not create an undue hardship on the Examiner to search Inventions I-V together" as the basis of the traversal have been considered, but they are not persuasive because the Examiner has shown that the inventions require separate classification as well as different fields of search, the Restriction requirement is made final for reasons of record.

### ***Claim Rejections - 35 USC § 103***

16. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

17. Claims 1-15, 16-26, 52-72 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeWinter 6,071,619 in view of Leenslag et al. 6,335,379.

DeWinter describes the method of applying elastomeric skin materials, polyurethane (column 5, lines 20-30; column 6, lines 35-36). DeWinter describes the polyurethane can be applied by spraying in one layer, (column 6, lines 35-36). DeWinter describes spraying a second layer of polyurethane, (column 6, lines 40-44). DeWinter describes this method of spraying polyurethane as skin layers is utilized in the automotive industry for interior trim parts for the automotive industry which would correspond to the claimed firewall, dashboard insulator, floorcovering and upholstery. DeWinter differs from the claimed invention because it is silent about the sound attenuating properties.

Leenslag describes polyurethane foams which are used in automotive seating, (column 2, lines 24-27), as well as foams for sound

insulation for automotive applications as well as vibration isolation, (column 8, lines 35-40). Leenslag describes the temperature ranges necessary for application of the polyurethane foams in order to meet particular needs for the sound insulation, (column 8, lines 22-27).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method of DeWinter with the flexible polyurethane foam of Leenslag motivated with the expectation that the application of the flexible polyurethane foam of Leenslag would improve the sound attenuation of the automotive applications regarding the claimed components of the claimed invention as noted, (column 8, lines 35-40) of Leenslag.
